Software engineer with a background in quantitative finance with over 8 years of experience building full stack apps

Professional Experience

Senior Manager, Financial Risk Management - KPMG

Sep 2023 – Present

- Led the development and support of a flagship AI powered SaaS platform for web and back end for 16 client accounts valued at \$10M-\$25B, including translating financial requirements into code, unit testing and microservices orchestration. Successful deployment led to earning “Global Innovation Award 2024”
- Managed a team of 8 engineers developing, and deploying UI and APIs for the following apps: Liability Compressor, Asset Aging for fixed income and equity, Miscellaneous Reserves tool by using React, Typescript, Python, C++, PostgreSQL and Databricks
- Empowered other devs on the team through leadership by running agile development meetings, mentoring intermediate/senior developers and leading process experiments

Manager, Financial Risk Management - KPMG

Dec 2021 – Aug 2023

- Technical lead and engineer for GRC suite. Built and deployed React application that replaced many manual model risk management processes. The development has received \$600k investment and eventually unloaded an audit team by 40%
- Designed a theme editor and components that has boosted the creation of new apps by 30%. This has allowed the creation of KPMG’s uniform apps that follow the same compliance standards
- Brought legacy systems up to standard DevOps practices: automated deployment, migration to Docker/AKS

Full Stack Developer - Ernst & Young

June 2020 – Nov 2021

- Developed core features like analytics and automatic reporting UI pages in React Typescript, documentation, as well as data preprocessing, validation and ML features like anomaly detection and time-series analysis using Python
- Participated in research for extending ML validation capabilities (explainability, robustness and scalability) as well as cross-training of staff on machine learning fundamentals and software development practices

Back End Software Developer - msg Global Solutions

July 2018 – May 2020

- Successfully designed and implemented services (C++, Java) and RESTful APIs (Spring) around cost allocation and financial risk for clients in Banking and Insurance industries
- Developed an insurance claim processing engine by integrating preselected features (human and historical data), autoregressive models, and deep neural nets (RNNs), ultimately succeeding in large decision workflow automation working with 95% accuracy
- Acted as Team Lead by reviewing code, coaching team members and providing exceptional delivery

Quantitative Analyst – Laurentian Bank

Jan 2017 – June 2018

- Created a ML model in Python that automated a large part of the credit decision process, reducing human error by 19% and increasing decision accuracy (resulted in receiving “Best use of AI in Credit” award from the bank)
- Pioneered an underwriting and pricing engine into the local platform, reducing delays caused by external APIs. This has enabled instant underwriting decisions and real-time pricing. Significantly boosting efficiency

Skills

Technologies: JavaScript, NodeJS, React, NestJS, Angular, Golang, Ruby on Rails, Python, Flask, Django, Java, Spring Boot, PHP, NoSQL, PostgreSQL, GraphQL C/C++, Spark, Hadoop, MongoDB, MySQL, REST, Git, Docker, Kubernetes, Kafka, Redis, Event-Driven Architecture, CI/CD (Jenkins), Jira, AKS, Unix, HTML5, CSS3, AWS, Azure, Databricks, Statistical Modeling, Machine Learning, Deep Learning, NLP, Transformer, GenAI

Education

Software Engineering Diploma
CFA Level II Candidate
Honours B.Sc. Finance and Econometrics

BrainStation, Toronto 2018
CFA Institute, Toronto 2017
Moscow Financial University, Moscow 2014
